

TECH BULLETIN

Tech Bulletin Prepared By VP's Quality Control Team

Fuel Hygiene

This tech bulletin is to bring awareness to our customers of Fuel Hygiene from the production line to the race tank. VP Racing fuels makes every effort to ensure fuels are free of contamination by filtering every component coming in and triple filtering before going out, including water detection. Our storage tanks and filters are regularly inspected and maintained to ensure consistency of the product. Additionally, our drums are lined with a food-grade protective coating to ensure no particles or rust contaminate the fuel. To fully protect the fuel before it enters your tank, VP recommends that consumers use the same filtering practice, using a 10-micron filter or better while transferring fuel to the vehicle.
