

TECH BULLETIN

Tech Bulletin Prepared By VP's Quality Control Team

TORQ DX Color Change

This tech bulletin is to bring awareness to our customers of a color change to TORQ DX racing diesel from light purple to light orange. Don't worry, VP's diesel race fuel is still the same consistent formulation that racers can rely on time after time. VP's quality control team inspects every fuel component that enters into production to ensure the integrity of the components before it is ever made into fuel. With the reality of today's supply chain, some components are now coming in with color added, making it difficult to make the original light purple color, therefore VP is switching to light orange to maintain color consistency.
